

Paper 97 – Education

PARENTS' MANAGEMENT STYLE AND STUDENTS' ACADEMIC ACHIEVEMENT

Frans Sanger
Universitas Klabat

ABSTRACT

The purpose of the study is to determine whether there is a relationship between parents' management style and students' academic achievement. The 124 grade XI students of SMA UnKlab were the respondents for this study. The convenience sampling method was used to collect the data. The results indicated that lead management style was the style parents used at home to educate their children (students) while students' English achievement was in the good level. There was no significant relationship between parents' management style and students' academic achievement with $p = .000$ and $r = .514$. It is recommended that teachers may practice lead management style in leading, and communicating with students at school. To parents that they may apply lead management style to be the best style to educate their children at home.

Keywords: Lead Management Style, Boss Management Style, Academic Achievement
